

Automodeler

Automodeler automatically generates modeling objects and diagrams from existing process and system documentation. Automodeler also helps you gather process knowledge from staff via table-based questionnaires - saving you time and ensuring your models can evolve more quickly to a state where they truly reflect how the business works.

At a glance

Automodeler interprets data from the following file types:

- Microsoft Word
- Microsoft Excel
- Microsoft Project
- CSV

And exports models into the following file types:

- Microsoft Word
- Microsoft Excel
- Microsoft PowerPoint

Challenge

In most organizations, a significant amount of processes and systems knowledge is held in disparate Microsoft Word and Excel documents and in legacy databases. Even more useful knowledge is locked away inside people's heads. Gathering, centralizing and analyzing this knowledge is vital when planning and executing successful process and IT projects, but the task is far from easy.

Solution

Automodeler kick-starts enterprise modeling by importing valuable information from a range of file formats into Corporate Modeler - automatically generating objects and diagrams.

Automodeler also helps you gather unknown process know-how by generating table-based questionnaires in MS Word or Excel format. Once completed by staff, Automodeler uploads these questionnaires into your model and automatically converts the contents into objects and process flow diagrams.

Results

- Value creation is faster:
 - Analysts can be more effective and efficient.
 - Intellectual assets [models] can be created more quickly across the organisation.
- Value creation is more reliable, consistent and of higher quality.
- It is especially beneficial for:
 - Business process analysts.
 - Model managers.

Automodeler accelerates projects by consolidating vital knowledge quickly.
