

10.00 - 10.30	Reception - Coffee & Pastries
10.30 - 11.30	Welcome & Introduction Corporate Modeler 2009.1 - Newly released features. <p>This opening session will cover many of the newly released features within Corporate Modeler 2009.1 including the auto-complete, a functionality designed to speed up the reuse of your content and improve the accuracy of your model; region enhancements offering even more meaningful quantitative and qualitative information and Corporate Publisher's diagram navigator offerings more versatile navigation by utilizing XAML/Silverlight technology.</p> V-Modeler - The power to expand the capabilities of your modeling within Microsoft Visio. <p>Learn how the Casewise V-Modeler can provide Visio users with the components and functionality it lacks and offer any number of users the ability to use Visio as a front end to the Casewise toolset.</p> WebModeler and Portal 2009.1 <p>The Casewise Portal offers user's direct access to the Corporate Modeler Extensible Repository via your web browser, ensuring total architectural alignment with Corporate Modeler. The Portal opens the content of the Corporate Modeler repository to your entire enterprise and reveals the connection of information, people, systems and devices through one direct source. The Portal 2009.1 includes the latest version of the Casewise WebModeler. This separately-licensed component of the Portal is a state-of-the-art application that enables you to create and edit diagrams online.</p> <p>This session will look at how to maintain and gain access to your knowledge base as well as being able to design your processes directly from the web through a zero foot print application; how to make the useage and navigation easier using the newly introduced diagram navigator and how to edit html text in the Portal impacting on communication with different stakeholders. Other features being presented include, the new integrated search engine which includes ranking by relevance as well as the improvements of bubble charts.</p>
11.30 - 12.00	Client Case Study Presentation <p>How an international project has implemented EA</p>
12.00 - 13.30	Lunch Break - Complimentary Buffet
13.30 - 14.00	Corporate Modeler - An increasingly open and customizable solution through its API <p>This session will explain how API's grant the opportunity to improve Corporate Modeler's features or complete them with user defined modules. Users can now read the entire content of the repository to fully benefit from it as well as write to the repository in order to ease and automate its development and population. Furthermore, users also have the ability to automatically create full graphical representations (diagrams) of the repository content.</p>
14.00 - 14.45	New Solutions Available for Early Adopters CM Intelligence – New Casewise open reporting services <p>This presentation will explain how open reporting services grant direct access to the database for any reporting requirement using either the Microsoft SQL server reporting services tool provided during the installation or your own SQL reporting tool (Cristal report, Business objects, Cognos etc...)</p>

Federated Models

The federated model is a solution creating common design/content between multiple models which can launch synchronization on a defined base.

Learn how to manage a master model; how to transfer automatically the changes in the models managed by the business units?

Document management plug in and SharePoint accelerator

From the Web Portal, it is now possible to attach documents that are stored in SharePoint to your Corporate Modeler objects.

Learn how to manage your documents in environments such as SharePoint and link it to your Enterprise Architecture.

14.45 - 15.00

Refreshment Break & Networking

15.00 - 15.30

Importance of your Communication – How to maximize the value your EA

This presentation will deal with how to communicate your Enterprise Architecture and Business Processes to different stakeholders and end users across an organization whilst yielding maximum return.

15.30 - 16.15

Existing Product Road Maps

CM 2009.1 FP1 (July 2009)

- Rule based drill down - better control of your enterprise framework
- Shape docking - improving visual representation of your diagram
- Auto filter - improve the search of existing objects

CM 2009.2 (end of 2009)

- Extensible rules engines - implement diagram rules for any methodology including your own customized methodology
- Rule based string builder
- Folder based navigation

16.15 - 16.30

Questions & Answers
